
Sectional Door **SPACELITE®** HTU

BUTZBACH
MADE IN GERMANY

Made in Germany

Unique Technology

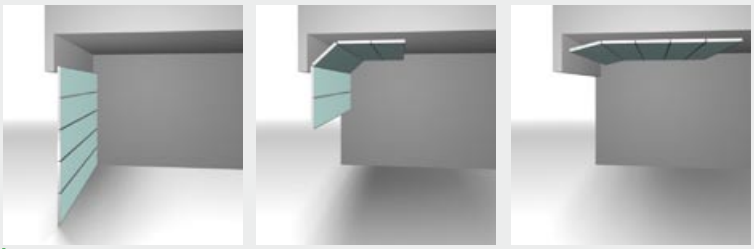
- Translucent Fibreglass
- Low lintel (300 mm)
- Safe and reliable
- Without hinges, helix cables or torsion springs
- Pass door with low threshold
- Customer-specific solutions
- Installation and service from a single source

BUTZBACH
MADE IN GERMANY

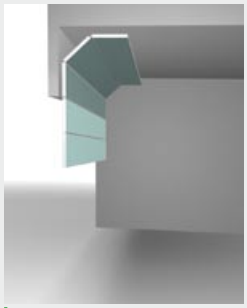
Extraordinary Material

We use Fibreglass door fillings in our sectional doors, a material used in shipbuilding and aerospace engineering due to its versatility, durability and sturdiness.

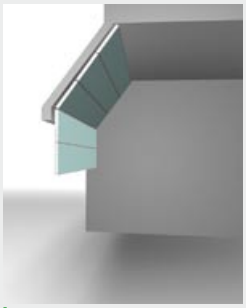
Fibreglass has a translucence of up to 78%, enabling bright, pleasant working environments and a subsequent reduction in lighting expenses.



Upon opening, the door sections are deflected and guided along the ceiling into the interior of the hall.



Increased deflection height



Rails guided along the roof

In spite of the different opening mechanism the stacking door and the sectional door have an identical exterior appearance and can be optimally combined.

The sectional door SPACELITE HTU combines the opening mechanism of a sectional door with the product and material-related advantages of the Butzbach-stacking door.

The sectional door is particularly suitable for constructions with low lintel. For the standard version, the required lintel height is merely 300 mm.

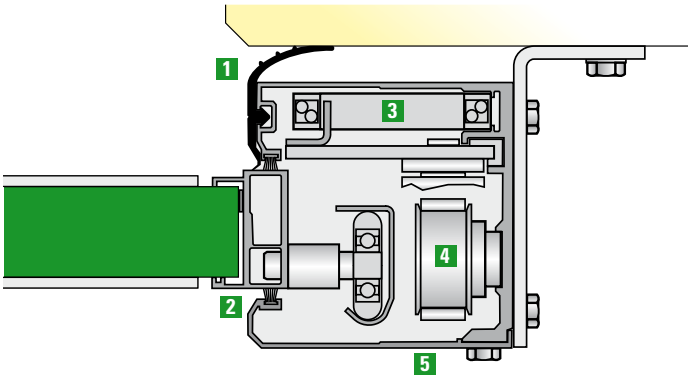
Design

Design Variety

The sectional door can be equipped with a pass door in the same design. The threshold is required to be only approx. 25 mm, reducing the risk of stumbling.

Numerous design options including: colour coated aluminium profiles and fibreglass incorporating images, enable us to provide the sectional door that you require. Three fibreglass colour options "Emerald-green", "Sapphire-blue" and "Brilliant" and the combination with the fibreglass façade system VARIOPLANplus, increase the diversity of utilisation.

1 Rubber profile towards the reveal
2 Brush profile
3 Cable guide
4 Revolving tooth belt
5 Track cover, detachable
for trouble-free maintenance



The trilaterally closed aluminium track reliably protects all functional elements against dirt, humidity and damage.

Functional System

The sectional door SPACELITE HTU is a hinge-free door system. Protruding hinges are deliberately avoided in order to reduce the risk of injury and the maintenance load.

The low maintenance electrical drive unit allows convenient opening and closing. We do not use torsion springs as they are subject to wear. The anti-drop device is mounted level with the drive unit, therefore eliminating hazard to people and material.

Service

Service

Quality and All Encompassing Service

We guarantee distinct quality and longevity in our customised door solutions, having had over 30 years of experience in development, designing, manufacturing, assembling and after sales service.

Butzbach employees operate according to the motto: “Everything from a single source“.

In providing all the service and support you will need, we can ensure that you will be completely satisfied.

At Butzbach, service starts with consultation. Our focus is on in-depth and constructive dialogue with our customers. Our team of consultants create individual door solutions efficiently, competently and according to your specification and needs. You will be assigned a personal contact who will work with you for the entirety of the project. Your contact knows your individual specifications and can thus, react to changing requirements.
Our installation and service stations are located throughout Germany, so we can guarantee quick and costefficient service. Please contact us to find out about special service and maintenance offers available now.
